Environmental and Climate Policy

Meca-Trade · Policy ENV-001 · 30.10.2026

1 Commitment

Meca-Trade is committed to environmental sustainability for current and future generations. We comply with applicable laws and regulations, operate in line with ISO 14001 requirements and continually improve our environmental performance.

We measure, reduce and report our greenhouse gas emissions every year in line with the GHG Protocol (Scope 1, 2 and 3). Over 99% of our emissions come from the materials we purchase and their transport, so that is where we focus. As a materials trading company, we reduce emissions mainly through what we source and offer: we actively offer customers lower-carbon alternatives, while customers make the final choice based on their own requirements, such as product specification, price and availability. For this reason, our main climate target is set as emission intensity per tonne of purchased material.

2 Baseline 2025

In 2025 our total carbon footprint (Scope 1–3, market-based) was 72,968 t CO2e. We purchased 23,680 t of material, giving an emission intensity of 3.08 t CO2e per tonne purchased.

3 Targets

Target	Baseline	Target
Emission intensity, Scope 1–3 (t CO2e / t purchased material)	2025: 3.08	−10% by 2030 (≤ 2.77)
Scope 1 & 2 GHG emissions (SBTi near-term target, min. −42% by 2030)	2022: 36 t CO2e	−42% by end of 2030
Primary CO_2e data collected from key suppliers (representing ~90% of raw material purchase volume)	2025: 30%	≥ 50% by end of 2027

We also report absolute emissions every year. Carbon credits are not counted towards the targets.

4 Actions

Climate

- **Sourcing:** request emissions data from our main suppliers and prefer lower-carbon materials and eco-conscious suppliers.

- **Customers:** actively offer lower-carbon alternatives.
- **Transport:** optimise through fuller loads and consolidated shipments; prefer lower-emission carriers.
- **Premises:** switch to renewable electricity and improve energy efficiency.
- **Vehicles:** choose low-emission vehicles at renewal.

Other environmental impacts

- **Resources and waste:** minimise energy, water and packaging use; prevent waste and emissions at source; recycle and reuse following circular economy principles.
- **Biodiversity:** respect and protect ecosystems and consider biodiversity in our operations and sourcing.
- **People and partners:** train employees on environmental responsibilities and engage customers, suppliers and other stakeholders in shared sustainability work.

5 Responsibilities, reporting and review

The Managing Director approves this policy, has overall responsibility for ensuring compliance with it and provides the necessary resources for its implementation. The Sustainability Manager is responsible for coordinating the implementation and continuous development of the policy, including the annual calculation of greenhouse gas emissions and monitoring progress against the environmental and climate targets. The policy and related targets are developed in cooperation with the Management Team based on proposals prepared by the Sustainability Manager. The Management Team reviews progress against the targets annually as part of the ISO 14001 management review and decides on any necessary corrective actions or changes to the targets. Progress is reported publicly once a year on the company website. The policy is reviewed annually, communicated to all employees and publicly available on the company website.

Approval

Soili Järvinen
